

SLIP CORNERS

At the Board Meeting of June 14, 1994 approval was granted for slip lessees to fill in slip corners, at their own expense, under the following conditions:

1. Design and workmanship shall conform to the 10' and 12' examples located in slips B-8 and B-16 (Cooper and Plehal).
 - a. All lumber to be 2" x 6", CCA Treated yellow pine, #2 or better.
 - b. All lumber shall be new and no warped or twisted boards permitted.
 - c. All fasteners shall be galvanized or clad steel deck screws.
(you will need 2", 2.5' and 3' screws)
 - d. All miter joints shall be cut at 45 degrees.
 - e. The 2" x 6" deck boards must be spaced at least 3/8" apart to conform to the appearance of the existing docks.
2. Once in place, slip corners shall become the property of WVSC and not be removed should the lessee change slips.
3. See diagrams below for construction details.
4. If you are not a reasonably accomplished carpenter, please get help!
The object is to make these additions pleasing in appearance.
Call Jerry Cooper or Gene Plehal if you have questions.
